

Group 1
L04 Exploratory Data Analysis
ITAI-1371
Viswanatha Rao

Team Member Contribution Journal

Viktoriya Kurmisheva:

Completed Experiment 1 in the student experimentation section by creating the visualization for survival based on the port of embarkation and writing the observation that explained the pattern shown in the results. Answered Question 1 in the Knowledge Check section by explaining the main purpose of Exploratory Data Analysis and how it helps us understand a dataset before moving further into the machine learning workflow. Also wrote and organized the group's reflective journal using the concepts, visualizations, and observations from the completed lab. In addition, created the GitHub repository for the project and uploaded the group's work there so the files could be organized and shared in one place.

Tien Manh Nguyen:

Shared the original notebook with the group and worked on the provided visualization sections that were not running correctly. Completed Parts 1, 2, and 3 of the notebook, which covered the main Exploratory Data Analysis workflow before the student experimentation section. He worked through the provided code and corrected cells that were not running properly so that the required outputs and visualizations displayed correctly. Also answered Question 2 in the Knowledge Check section. After the experimentation tasks were completed, he reviewed the student experiments and their observations to make sure the results and explanations were clear and consistent with the visualizations. He then reviewed the completed notebook and uploaded the final version to the group's GitHub repository.

Zaid Alayeddy:

Completed Experiment 2 in the student experimentation section and wrote the observation explaining the results of the visualization. Also answered Question 3 in the Knowledge Check section based on the concepts explored throughout the lab. In addition, gathered the contribution information from the group members and used it to write and organize the Team Member Contribution Journal. Reviewed the contribution details to make sure each member's work was clearly represented and that the journal accurately described how the tasks were divided among the group.
